

CQ DATABASE®.org

WHAT IS CQ DATABASE® ?

The TVTC CQ Database® service provides a simple way to manage contractor company compliance. Our CQ Database® system is used by plant administrators and industrial contractors to manage and ensure contractor qualification compliance specific to individual facility requirements.

Our IRMI certified CQ Auditors assist contractors with profile completion and screen company data such as historical safety data, insurance information, license information, and so much more.

WHAT ARE THE BENEFITS OF CQ DATABASE® ?

Quick Vendor Verification

Response times to CQ requests are generally within one business day.

Reports & Reminders

Users receive notifications about any upcoming deficiencies or expirations.

Personalized Profiles

Clients can personalize profile requirements to meet individual standards.

Lower Costs for Managing Vendor Compliance

Clients are only charged by the number of vendors in their system - significantly less than other leading products and more cost effective than hiring someone in-house.

Easily Accessible and Affordable Regardless of Company Size

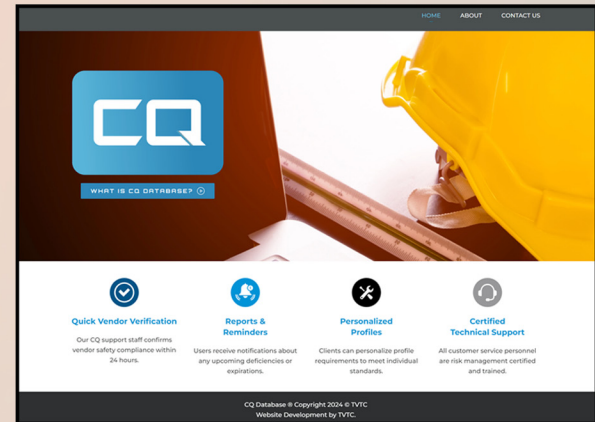

The CQ Database® provides vendors with an easily accessible and affordable method to upload and maintain their annual safety and qualifications data.

Trained and Certified Technical Support

Our IRMI certified and trained team members are available to assist clients and vendors with the initial establishment of profiles, data entry, and with any questions concerning the CQ System.

Modern, In-house Development

Our exclusive CQ Database® software was developed in-house at TVTC. Our in-house maintenance affords opportunities for our customers to play a key role in system updates and the development of new software capabilities.
